

To Whom It May Concern:

In the matter of the LightSquared Subsidiary LLC request for a waiver of the "integrated service" rule with regard to its Mobile Satellite Service license in the L-Band, I would like to voice my concern.

We are a John Deere agricultural dealer and would be very compromised by Lightsquared's proposal. We would not be able to provide our customers with the GPS systems they are now using to operate their farm businesses. We have many new customers that would like to use this technology to further their agricultural potential and many existing customers that find it very beneficial to have this technology already in use. We also use our GPS equipment to help us find our customers and get us to the right destinations.

Also we use cell phones as a vital tool to meet and service our customers when there are problems. This is a very important part of our customer service. If we have a farmer with a problem when they are in the field we want to get to them right away and get them running again. With cell phone interruptions that would not be feasible.

If LightSquared is allowed to go ahead with this plan, it will not only disrupt our customer service, it will impact the whole Country in a negative way.

Thank your for your time.
